

News Release

New Handybook for Electrical Contractors from Aico

Aico Ltd. has just published a new Electrical Contractors Handybook covering its market leading range of mains powered Fire, Smoke and Carbon Monoxide (CO) alarms.

The pocket sized Handybook has been colour coded into different sections covering all you need to know about choosing, installing, testing and maintaining smoke and CO alarms. It features simple, clear diagrams for quick reference, checklists, dos and don'ts, frequently asked questions and revealing fire statistics. Each section even has its own notes page for comments to be added.

The Electrical Contractors Handybook provides comprehensive information on Aico's full product range, including the new Ei2110 Multi-Sensor, the Ei140 and Ei160RC Series alarms, CO alarms and the company's unique RadioliNK products. RadioliNK is compatible with all Aico Easi-fit alarms, allowing for wire free interconnection for extra alarm coverage without the installation time, costs and disruption associated with hard wired interconnection.

In addition to these key ranges, the Electrical Contractors Handybook also covers Aico's long standing Ei150 Series of smoke alarms, low voltage smoke and heat alarms, special needs systems and additional devices such as the Ei411H Remote Control Switch for locate, hush and test functions. The Firecap range of intumescent products are also introduced.

Copies of the Electrical Contractors Handybook are available from Aico by calling 0870 758 4000.
