

The only manufacturer with a Heat, Smoke and CO Multi-Sensor Alarm

Our Ei3030 Multi-Sensor Fire and Carbon Monoxide Alarm is the latest edition to the advanced 3000 Series. Combining optical smoke, heat and carbon monoxide sensors creates the greatest fire and CO response, while maintaining the simplicity that installers love. We are the only manufacturer to offer a domestic heat, smoke and CO multi-sensor alarm.

For the most reliable protection, all of our alarms are third party accredited to British Standards, symbolising a recognised mark of quality and trust in our life safety products.

BS EN 14604:2005
BS 5446-2:2003
BS EN 50291-1:2018

Capable of giving real-time data with a sim-based Gateway

The Ei1000G Gateway is designed for use with other Aico radio frequency devices and can track events triggered within an alarm system, such as an alarm activation, mains absent fault, alarm head removed or end of alarm life.

When combined with the Environmental Sensors, the Gateway uses IoT technology to record data about temperature, humidity and carbon dioxide which generates actionable insights and enables landlords to detect the early signs of condensation, damp and mould. This will help landlords take a preventative approach, reducing call-outs and ultimately saving money.

Direct data extraction while on-site through AudioLINK+

Extraction can be done on-site without the need for alarm removal with AudioLINK+. With 3 pushes of a button, incident details are recorded on a phone/tablet and instantly generated into a report. This information is stored for the rest of the life of the alarm, enabling information history to be retained.

The Alarm Status Report provides evidence for maintenance of records - required for Private Landlords renting out properties in England.

More about HomeLINK:

Trusted by Fire and Rescue Services and Social Housing Providers across the UK.

"With a deployment of up to 1,000 smart homes, we will test and develop new maintenance and wellbeing services for social housing residents. I'm glad that we are part of a partnership that has the experience and technology to support Leeds in this journey."

"When it comes to life safety and protecting your home and loved ones, it's always important to use compliant, high-quality products, installed by a qualified electrician where necessary."

"We have been using Aico products for 25+ years and have never had issues. It became clear through trying to achieve compliance with BS5839-6 we were impacting our KPIs. We spoke with Aico about potential solutions and the SmartLINK modules were identified as the resolution."

"The sensors will give us a better understanding of the structural and environmental risks within our properties, allowing us to identify any issues."

Made from recycled materials

Safety first, Aico first.

July 2025

an **Ei** Company

We are a business that takes pride in providing education to students, as well as those in the industry.

We offer a range of CPD certified modules and training schemes to give more details and insights into our products, Standards and Legislation, and best practices.

Expert Installer Training

Being trained by Aico guarantees you all the knowledge required to install to the highest standards and ensure resident safety.

Our free, award-winning Expert Installer training is FIA CPD accredited and earns you 2 hours of CPD time. This covers topics such as alarm siting, sensor types, installation, standards and regulations, as well as how alarms work with other Aico platforms:

City & Guilds Assured Training

Aico is the only manufacturer to offer City & Guilds training - a global quality benchmark recognising excellent training and learning.

Our Domestic Fire and Carbon Monoxide Alarm Systems course is a free full-day course at our headquarters in Oswestry and is available to those who have completed Expert Installer training.

This course is designed to give a detailed understanding of design, installation, maintenance, interconnection, siting, and electrical connection of domestic alarm systems. Our City & Guilds assured training consists of both theory-based and practical sessions, delivered by a member of our expert Technical Team.

More information on our CPD accredited presentations:

Home life safety should not be overlooked, and with Aico alarms, you can expect a high quality product.

With every product made in our own factory in Ireland, we know every single detail about all of our devices, meaning no gaps in our system.

Aico, the European market leader in home life safety, provide the highest quality products on the market which save both residents and landlords valuable time and money.

Dust compensation

All of our fire alarms compensate for dust reaching the sensor. This reduces the chances of a nuisance false alarm caused by dust, while still upholding the life-saving features to alert the resident in the event of a real fire.

Same base since 1999

Our alarms come with our easi-fit base which allows alarm heads to slide on with ease.

Our base has been the same since 1999, so changing alarm heads remains easy.

Our eco-fit range is a box of 10 alarm heads to reduce product and packaging waste where an alarm base is not needed. This is something that only Aico offers.

Less call-outs

We understand that an unreliable alarm causes more call-outs to a property, inevitably costing more money.

We guarantee high reliability when installed correctly.

Safety for all

We recognise that not everyone can benefit from the siren of a fire alarm. So, we have options that can alert people through strobe lighting and vibrations.

About Aico:

Unrivalled Technical Support

We are here to offer you market-leading support, from our experienced team of 32 Relationship Managers across the country, to our devoted in-house technical team.

Whether you have a query regarding fire safety or carbon monoxide regulations, product data sheets or you need support with a specific product or the installation process, we can help you.

Informative Guides & Publications at your hand

To make sure you have everything you need, we have a large variety of educational and informative guides and publications available as digital downloads or via post.

From the popular Product Selectors and Handbook (also available as an app), to pocket sized guides on legislation and Internet of Things technology.
